

An integration of IBM’s best in class advanced analytics capabilities with Whooster Investigative Data

Globlue Technologies and Whooster have recently established an alliance to integrate Whooster investigative data into ARKHOS i2 Enterprise Portfolio. This integration enables Law Enforcement, Government, and Enterprise (Private Sector) clients to generate (OSINT) Open-Source - actionable intelligence in real time, directly from IBM i2 Analyst’s Notebook dashboard.

Real-Time Investigative Data

Whooster’s extensive, real-time, investigative private, public and proprietary data sets are ideally suited for IBM’s i2 Analyst Notebook platform. Globlue has developed an efficient and intuitive integration that takes full advantage of Whooster’s data and technology strengths. Intelligence analysts and investigators can choose from a variety of options to start a search by phone number, name or address on a person or organization and score results in seconds. The visualization feature allows selected entities to be transferred to the analysis dashboard where a variety of sophisticated analytical tools can be used to determine who is who, who knows who, and who does what.

The click and *expand Whooster* search can be applied to multiple entities simultaneously. When such a request is made i2 intelligence sophisticated algorithms work behind the scenes, to uncover non-obvious relationships and suspicious patterns among multiple entities, across several degrees of separation.

Identifying patterns among complex networks is simple and intuitive. Stored intelligence from previous working cases can automatically be merged when association patterns are identified, giving analyst the ability to uncover hidden connections among disparate data sets.

Use Cases and Application

ARKHOS Data Fusion Whooster Connector can help agencies and organizations from a variety of industries investigate criminal activity by turning overwhelming big data into actionable intelligence:

Real time investigative data turned into actionable intelligence with ARKHOS Data Fusion Whooster Connector (USA and Mexico Data).

Introduction

Whether they are part of the private sector or working for a government agency, today’s intelligence analysts and investigators are facing extraordinarily pressure to respond quickly to a wide range of threats.

The need for real time response is driving a revolution in the data-to-decision (D2D) process. In order for organizations to turn massive data sets into actionable intelligence, they need to apply reason to data, which requires advanced analytics capabilities. This means organizations need to maneuver data from a variety of sources at large scale, and in a range of formats; both structured and unstructured.

The practical application of performing advanced analytics across large disparate data sets, however, is that your investigators and analysts have access to more data that they can process in a timely fashion.

ARKHOS Data Fusion Whooster Connector was designed to apply intelligence on top of Whooster’s extensive investigative private, public and proprietary data sets, giving intelligence analyst and investigators the power to intuitively make sense of massive amounts of data when performing comprehensive searches. This enhanced feature provides access to comprehensive 360° entity intelligence with link expansion capabilities through multiple degrees of separation in real time.

ARKHOS Data Fusion Whooster Connector empowers intelligence analysts and investigators to quickly utilize the advanced capabilities of a forensic analytical tool to better understand relationships and patterns within Whooster data sources, making sense to complex investigation cases.

ARKHOS Data Fusion Whooster search includes:

- Names/Aliases/Additional Names
- Social Security Number
- Date of Birth
- Death Records
- Full Address/Additional Addresses/Historical Addresses
- Phone number/Phone Carrier/Phone Porting Date/Phone Type/Phone History/Carrier History
- Relatives
- On-line Ads Search
- Social Media Search
- Common Residences
- Arrest Records
- Mexico Person and Phone Data
- Sex Offender
- National Security Watch Lists
- Health Care Providers

“Whooster is excited about the collaboration with Globlue to develop the ARKHOS Whooster i2 Connector. This integration will increase the Globlue and Whooster customers’ experience by generating real-time, actionable visualizations through the i2 Analyst Notebook dashboard, creating efficiencies and delivering a robust tool to solve cases faster. We are delighted Globlue has made this enhancement a reality.”

Richard Spradley | Whooster CEO

About Globlue Technologies
 Globlue is a systems integrator and technology development company headquartered in Houston, Texas. Globlue develops customer-centric solutions to help its customers worldwide to solve problems and provide an edge for business, governments and non-profits. Globlue is an IBM Business Partner, member of IBM Safer Planet Council, and it is authorized by IBM to design, develop and enhance i2 software using IBM’s i2 SDK (a restrict code).
